Follow the guidelines: Do not treat active TB patients except in approved facilities, meeting all health department, CDC and Health Canada standards, in the context of a complete respiratory protection program. CAUTION: The outside of masks and face shields are likely to become contaminated during use. Wash hands after touching any contaminated surfaces. Do not touch outside of the mask with wet or contaminated gloves or hands. Such contamination may compromise mask barrier asepsis by encouraging migration or "wicking" of microbes through the mask.

AllOut Health, Inc. can make no warranties or representations, either expressed or implied, that these products will fully protect the user from exposure to blood or bodily fluids or risk of contracting infectious diseases. OSHA requires the employer to evaluate the anticipated exposure and select the appropriate protective masks to prevent contamination of skin, eyes and respiratory passages.
