

FEEL THE DIFFERENCE OF MEDICINAL HEMP

FULL SPECTRUM CBD EXTRACT* (700MG)**

Our hemp extract is grown in this farm located in La Junta, Colorado. Unlike many oversea sources, strict quality control and product standards must be upheld in order to maintain US operations.

We Use USA Grown Hemp

Industrial hemp is genetically inferior to medicinal hemp, yet it is defined the same way by the regulatory agencies. Many brands/companies/legal counsel, who still believe that hemp derived CBD must come from overseas to be “fully legal,” are not taking into consideration the 2014 US Farm Bill (section 7606) which created--for the first time since 1937--a federally-legal pathway to growing “industrial hemp” once again on American soil. Our company conforms entirely to section 7606 of the 2014 Farm Bill and our “medicinal hemp” strain is registered with the Colorado State Department of Agriculture as “industrial hemp.”

Zero Heavy Metals*

Zero Solvents*

Zero Pesticides*

Zero Artificial Flavors*

We Use Proprietary THC Extraction Methods

We use the super critical CO2 extraction and no external additives in a patented process. This process allows us to retain all phytocannabinoids and terpenes for the best effect, while also lowering THC from the industrial hemp standard of 0.3%, down to 0.00x%! Our product sets a new standard of never containing a hundredth of a percent, of the psychoactive component. To prove it, we supply a third party test to every retailer selling the product for their review.

Specifically Bred for Highest Potency...

What separates our CBD from all other products using industrial hemp, begins with our medicinal cannabis strain. The cross-breeding of three naturally high-CBD/low-THC strains took place over a seven year period. It was done in order to reduce the amount of naturally occurring THC down to a level that classified it as “industrial hemp” (less than 0.3%)

Proper Dosage

CBD is a very unique ingredient, in that it works with very small amounts. Certain effects can be met with as little as a few milligrams, so it is best to start with a small dose and slowly increase as needed. Taking too much was actually shown in many of the studies to lessen the effect of the ingredient. This is another reason products in tinctures (dropper bottles) are very appropriate for the ingredient as they can be dosed in small or large amounts.

ABSENT VERIFIED :

We test each lot through a third party lab, to ensure there are no undesirable components.
