

MOLYBDENUM TUBING

Molybdenum is known for its strength and stability in high heat applications.

Molybdenum Tubing is widely used for thermocouple sheaths, semiconductors, electronic controls, medical devices, nuclear and aerospace critical applications, advanced electronics, solar thermal management technologies and high temperature furnace parts applications.

All our Molybdenum Tubing provides extreme strength at when used in very high heat conditions.

Molybdenum (Moly) Tubing is used as electrodes for Metal Disintegrators (MDM). Electro Arc is a widely known maker of these and other products for manufacturing and machining.

- **Wide range of sizes in stock**
- **Custom sizes – ODs and IDs available**
- **High pressure water tested and cleaned**
- **Quick deliveries**
- **Shipped in plastic tubes to minimize contamination**
